MyCleanPC PC Optimizer Software Overview

MyCleanPC is an all in one PC optimizer that boosts your system's overall performance. It has a simple and intuitive interface which even novice users can use with ease. This powerful tool will: protect your privacy by removing internet usage history, fix invalid registry errors, defragment your hard disks and remove junk accumulated on your PC for years.

MyCleanPC includes these powerful tools:

Privacy Protector

Privacy Protector removes internet footprints, sensitive information, and internet usage history which can compromise your privacy. This not only minimizes the risk of identity theft, but also recovers disk space and frees up system resources, resulting in a faster and smoother PC performance.

System Cleaner

System Cleaner helps recover disk space occupied by unnecessary temporary and junk files. It identifies junk files that have accumulated on your system over time and removes them with just a few clicks. Once all the junk is removed, your system will have more space and can run faster!

Registry Cleaner

Over time, orphaned registry entries can build up on your computer. These unnecessary entries are left behind after installing and uninstalling software programs and can reduce system response times or result in unexpected system crashes and freezes. Registry Cleaner removes erroneous registry entries and streamlines the registry to keep your PC running smoothly.

Disk Optimizer

The Disk Optimizer feature removes data fragmentation on your hard disks. It rearranges the data on your hard drive in a sequential order which can improve data access times, speed up the bootup process and improve system performance.
